

## Olive Point Limited

### *Construction Progress*

It has been two months since the first issue of this newsletter, the general contractor “Al Naboodah” has shown a great progress in the construction of Olive Point. With most of the villas completed up to the ground level and some villas have started works far above the ground to first floor or the roof. Al Naboodah has achieved this by raising the number of workers from 250 to over 500 excluding workers from sub-contractor companies and other suppliers.

DEWA connection has been confirmed by Jumeirah Golf Estates through their infrastructure consultants Mott MacDonald Ltd. This is a significant development for the project.

Solid structures with no compromises and no shortcuts are qualities that come with beauty in Olive Point villas. Your future home!

## Partners & Suppliers

### *Miele Appliances*

Using integrated appliances from Miele, the only premium brand in the household appliance industry represented on all five continents, Olive Point kitchens are individually designed to the highest standards of both design and functionality.

Miele appliances such as built-in oven, dishwasher, cooker hood island, electric grill, microwave with grill, built-in fridge, built-in freezer, coffee maker, washing machine, condensation dryer and drink cooler would make your life at Olive Point simply perfect.

### *Bang & Olufsen*

Bang & Olufsen, one of the world's finest names within the audio visual industry, is renowned for combining state-of-the-art performance with intelligent design and timeless craftsmanship. That is why we chose Bang & Olufsen to equip all Olive Point homes with audio-visual installations ensuring the truest possible performances you could ask for. Prepare to be entertained.

# Development at Jumeirah Golf Estates

## *Earth Course*

With the staging of the Dubai World Championship just eight months away, the Earth course is in spectacular condition. As the trees and other planted vegetation mature, the construction team continues to work on setting the final bunker contours. This is the last step before the bunker aces are stabilised and the sand is added, which will create a vivid colour contrast with the course's rich greens.

## **Norman Clubhouse**

The structural steel roof over the impressive facility is now complete and roofing works are progressing rapidly, with a third of the room area now tiled. Inside, block-work on the main and lower levels of the spa area is nearing its finishing point and plastering work in the member and non-member areas is advancing well. From many areas of both courses the Norman Clubhouse is already looking spectacular.
